

real wood floors for real life

Robina  
wood

Sapele trees grow to over 135 feet with trunk diameters from 48-72 inches. The grain patterns include beautiful "cathedrals" (so named after Gothic church architecture). Natural Sapele flooring appears iridescent and seems to change color in different lighting.

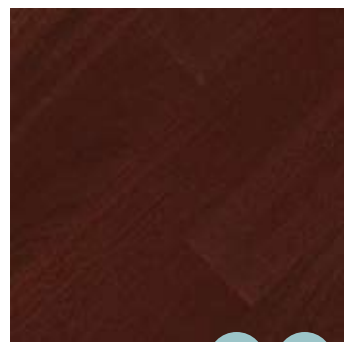

Sapele

1510 Janka

The Janka scale is a standard measure of the hardness of wood. With this system, the higher the number, the harder the wood. For more information on this rating, please visit [woodfloors.org](http://woodfloors.org).

## real wood floors for real life

Our approach to flooring is simple. We build our products on the premise that you, your family, friends and even pets will be using them, every day, for many years. All of our woods are meticulously engineered to be structurally superior on the inside and look beautiful on the outside—with no special treatment!

- ✓ High quality engineered wood
- ✓ Multi-layered satin finish
- ✓ Aluminum Oxide for durability
- ✓ Cross-ply core for stability
- ✓ Locking profile for easy installation

The Robina Wood collection includes a range of wood types featuring premium stains and finishes that will endure for generations.

24 Color Choices

Premium stains for true depth of color ranging from very light to dramatically dark.

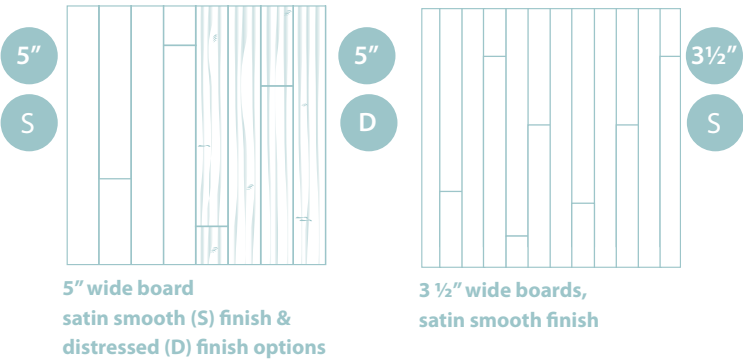

7 Wood Species

Selected for beauty, durability & abundance, the unique characteristics of each species is detailed throughout this brochure to help you decide which is right for you.

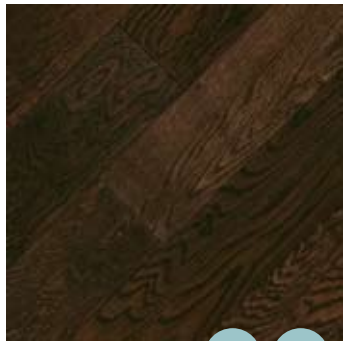

-  Sapele
-  Hickory
-  Jatoba
-  Birch (Betula)
-  Oak
-  Maple
-  Ovengkol

3 Format Options

Our distressed woods resemble the crafted floors of centuries past in a wider board (5") format complete with hand-sculpting and time-worn details. The smooth finish features an ultra-refined, satin surface available on 3 1/2" or 5" boards.

# White Oak

1360 Janka

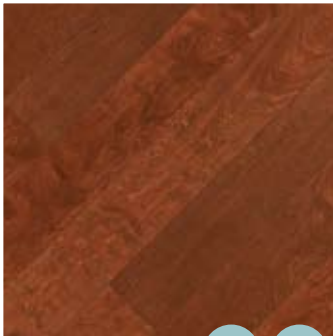

A beautiful and stately tree that grows tall and even, given some room. It is not unusual for this tree to be as wide as it is tall, and some have been known to live for over 500 years. White Oak takes stain very well and you will see many shades of colors on this wood.

Mocha Birch

Birch/Betula

1470 Janka

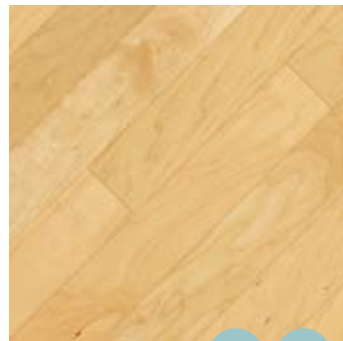

The Birch is a majestic tree that has been called “Queen of the woods.” The bark of all birches is characteristically marked with long horizontal lenticels, which often separate into thin papery plates. Birch wood can be easily stained, is a light color when in its unstained form and has subtle graining.

complete a remodel  
to remember

How will you look back on your remodeling project? With Robina Wood flooring, you'll definitely have something to smile about. The quick and easy installation will keep your plans on track. But most of all you will appreciate how great the floor continues to look 5, 10 or even 20 years from now.

 Maple 1450 Janka

There are over 200 species of maple. They are best known for their seedpods that look like helicopters when they descend to the ground and their delicious syrup. Maple is a hard wood that grows slowly. It is very light in color in its natural state and has little graining.

## from a house to a home

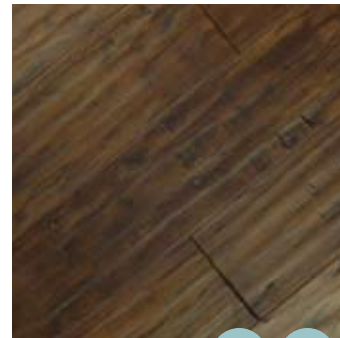

It is one of the biggest personal and financial investments we make, so every decision about your home is important. Choosing to improve your home with Robina Wood floors adds natural beauty, easy maintenance and overall value. It's a smart investment for today and tomorrow.

### Hickory 1820 Janka

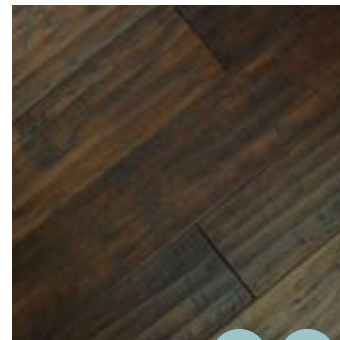

Most hickories are native to North America. Hickory wood is tough, yet flexible, making it a favorite with craftsmen of yore for tool handles, walking canes and golf club shafts. Hickory is naturally a light wood with dramatic graining.

Toasted Ovengkol

5" S

Natural Ovengkol

5" S

Ovengkol

1650 Janka

The Ovengkol is an evergreen tree native to tropical west Africa. It grows to heights of 100 to 150 feet with trunk diameters of 24 to 36 inches. Its wood is heavy and dense and can be worked to a very smooth surface. These traits make it an ideal choice for cabinetry, musical instruments and flooring.

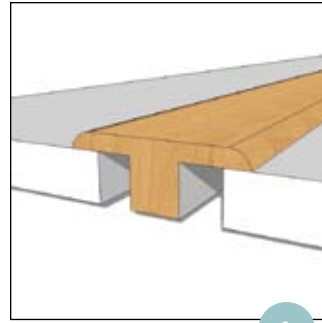

Jatoba is a tree common to the Caribbean, Central and South America. Although Jatoba is sometimes referred to as Brazilian or South American Cherry, it is not a cherry tree. Jatoba is a very hard wood that features a tan/salmon color with black accent stripes that over time turns to a deep rich red color.

#### A Note About Color

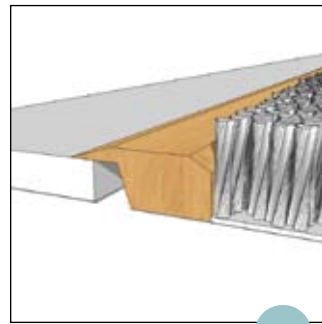

Wood is a natural product that changes color over time with exposure to light and other conditions. For this reason, the displayed samples in retail stores may vary in color from new product that is purchased.

The printed wood representations in this brochure may vary from the product as well. For more information about wood we recommend visiting the National Wood Flooring Association online at **woodfloors.org**.

## a job well done

It's the finishing touches that can make all the difference in any project. Robina Wood offers a complete line of coordinating trim pieces to help you provide a beautiful finish to your new floor installation.

### 1. T-molding

Transitions from wood to wood or another floor of equal height.

### 2. Baby threshold/square nose

Transitions from wood to vertical surfaces such as carpet or sliding glass doors.

### 3. Reducer

Transitions to a floor of lesser height such as vinyl.

### 4. Stair nose

Transitions at any stair edge or other step down location.

### 5. Quarter round

Transitions from the floor to the wall or baseboard.

naturally better  
woods for the world

We strive to use our natural resources responsibly and take many steps in the manufacturing of our products to protect and preserve the environment. Our all-engineered line makes the best use of wood by yielding up to **five times more flooring** than a solid hardwood product. We select woods based on natural abundance and we purchase these woods from **managed forests**. To preserve air quality, we use only the **lowest, E1 emissions** adhesives in the manufacturing process and our factory is **ISO 9001** compliant. To learn more about how Robina Wood Thinks Green, please visit our website at **robinafloors.com**.
